

Learning Objectives

After completing this activity, the participant should be better able to:

- Select lung cancer patients for appropriate targeted therapy based on histology along with molecular markers and immunotherapy
- Identify breast cancer patients for treatment with integration of novel agents
- Identify and utilize molecular targets and integration of targeted therapies for recurrent and/or metastatic squamous cell carcinoma of the head and neck
- Educate patients on the impact of predictive and prognostic markers and combination therapy for colorectal cancer
- Identify and prescribe novel treatment options for aggressive B-cell lymphomas
- Identify and prescribe novel treatment options for indolent B-cell lymphomas
- Educate patients on standard therapy and novel agent combinations in the treatment of multiple myeloma
- Utilize appropriate new therapeutic options for prostate cancer
- Utilize appropriate new therapeutic options in the management of malignant melanoma
- Cite the importance of symptom management and supportive care issues in the era of targeted therapies
