

Learning Objectives

After completing this activity, the participant should be better able to:

- Outline treatment options for advanced/metastatic breast cancer
- Evaluate optimal adjuvant hormonal therapy in breast cancer
- Identify adjuvant and neoadjuvant treatment options for triple negative breast cancer
- Identify emerging chemotherapeutic use of mTOR inhibitors and endocrine agents in treatment of breast cancer
- Describe strategies to treat metastatic bone disease in women with breast cancer
- Indicate the utility of molecular profiling in breast cancer patients
- Identify the use of prognostication tools such as EndoPredict Score and Oncotype DX RS for breast cancer
- Describe the current status of radiation therapy in optimizing local control in breast cancer
- Identify the role of accelerated hypofractionated breast radiation therapy
- Review supportive care and quality of life issues in the management of patients with breast cancer
- Discuss practice guidelines and its impact on reimbursement issues in the treatment of breast cancer
